[Split Soil Sampling Locations.pdf](#)

Mr. Justice,

As you noted in the email text below, Halliburton collected soil samples from the pad to evaluate worker health and safety considerations for equipment removal. Statoil split samples with them for these purposes and received final results this past weekend. You had previously requested these results which are attached along with a map of the sampling locations.

Please let me know if you have any questions.

Best regards,

Subject: Anticipated Date of Salvage Operations

Good Afternoon Gentlemen,

I apologize for copying everyone but based on previous questions I have been referred to one of you three so I thought I would include each of you on this email. I apologize if this causes confusion.

Last we spoke, Statoil and Halliburton were awaiting sample results to determine proper training requirements for workers conducting the salvage work. I am just checking to see if the results are in and whether a start date has been set or if there is an anticipated start date. I am working on scheduling not only for myself but for anyone I might have oversight of this work. In addition, I realize it may be too soon to know but is there an estimated time for completion of the salvage work. I have heard widely varying timelines and wondering if there is a timeline I can use for planning purposes.

Lastly, Glen Anthony had indicated that all the components installed on 7H had been located. I apologize if I missed it in previous emails but has all this been consolidated in one location and if not can I get the location(s) for each of the items?

Thank you all for your assistance.

Sincerely,

JJ Justice
